

Attenuator Set

Product Description:

The attenuator set is ideal for applications where the terahertz signal needs to be attenuated to prevent detector saturation. The set consists of 4 thin film attenuators mounted for easy and rapid deployment. The external diameter of the attenuators are 68mm, and the clear aperture is 60mm. These attenuators may be used as single attenuators or in combination as needed giving additional flexibility and range. The four attenuators are 30%, 10%, 3%, and 1% transmission.
